                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /notes—Torgan: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; UI-CF-ECI is a normalized-CDNA library containing the following tissue(s): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime sequence that is located between the Not I site and the [dT]18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TAG_LIB=UI-CF-EC1

(Pharmacia) with a modified polylinker; Site 1: BcoR I;
Site 2: Not I; NCI CGAP FH1 is a normalized cDNA library
obtained from a cell line derived from grade I
chondrosarcoma tissue. The library was constructed and
normalized according to Bonaldo, Lennon and Soares, Genome
Research, 6:791-806, 1996. First strand cDNA synthesis was
primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor,
digested with Not I, and cloned directionally into
pT773-Pac vector. The oligonucleotide used to prime the
synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
AGAATCCGGC. The cell line was provided by Dr. James Martin
from the University of Iowa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TAG LIB-UI-H-FH1

Consortium/LLNL at: http://image.llnl.gov Series: IRAL Plate: 44 Row: e Column: 10
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 23957699
This clone has the following problem: retained intron.

a modified polylinker; Site 1: Not I; Site 2: Eco RI;
plasmid DNA from the normalized library NCT_CGAP Kid3 was
prepared, and ss circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5,000 clones made from the same library
(cloneIDs 1323376-1323911, 1456007-1456775, and
1500552-1502855). Subtraction by Bento Soares and M.
Fartima Bonaldo. "

/ (unamplified): cs"
/ (unamplified): cs"
/ (unamplified): Two different donor
eyes ((15-80 years old) yielded approximately 600 mg of
dissected RPE/choroid tissue. This in turn yielded 340 ug
of total RNA and 7 ug of mRNA. A directionally cloned cDNA
library in the pCRVSPORT6 vector was constructed at life
Technologies (Rockville, MD; now part of Invitrogen Corp),
essentially following the protocols of the SuperScript
plasmid System (Invitrogen com/>). The library code
designation was cs. For this library, cDNA inserts were
cloned into the NotI/MUI sites of the vector. EST
analysis was performed on the unamplified library at the
NTH Intramural Sequencing Center (NISC)."

```
The specification describes secreted proteins and their corresponding polynucleotides which are useful for preventing, treating or ameliorating conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the conditions can also be diagnosed by determining the amount of the conditions in the polynucleotides. Specific uses are described for each of the products, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and communes ystem, autoimmune diseases, has disorders, diseases of the commune system, autoimmune diseases, hepatic and renal diseases, diabetes, inflammation, allergies, ischemic shock, Alzheimer's and cognitive communes, disorders involving osteoclasts such as osteoporosis, arthritis communes, diseases of testes, lung or thymus, diseases, arthritis communies, diseases of testes, lung or thymus, diseases, arthritis communies, diseases of testes, lung or thymus, diseases of testes disorders, infections and AIDS. The polypeptides are also useful for identifying their binding partners
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

```
The invention relates to novel human secreted proteins. The protein is useful for preventing, treating or ameliorating a medical condition. The constraint is useful for diagnosing a pathological condition or susceptibility to a pathological condition in a subject. The protein is condition in a subject in the protein is condition in a subject. The protein is useful for identifying a binding partner. The nucleic acid is useful for condition in a subject. The protein is useful as reagents for condition in a subject. The protein is useful as reagents for condition in a subject. The protein is useful as reagents for condition in a subject. The protein is useful as reagents for condition in a subject. The protein can be administered to patients having absent or decreased levels of different polypeptides, e.g. haemoglobin S (con haemoglobin B, superoxidase (SoD), catalase, DNA repair protein, to conhibit the activity of a polypeptide e.g. an oncogene or tumour receptor, to reduce the activity of membrane bound receptor by competing receptors used in reducing inflammation, or to bring about a desired response e.g. blood vessel growth inhibition, enhancement of immune cresponse to proliferative cells or tissues. The protein and the nucleic acid are useful for treating, preventing, detecting, diagnosting disorders (such as peripheral artery disease, limb cardiovascular disorders including neoplasms, cardiovascular disorders including neoplasms, cardiovascular disorders including neoplasms, cardiovascular defects, etc), neovascularisation disorders including neoplasms, cardiovascularisations disorders, wound healing and conditions of disease, Parkinson's disease, Buntington's disease, mania, dementia, etc. The protein cardious diseases caused by virus, bacteria, fundi, etc. The protein human secreted

                                                                                                                                                                                                                                                                                                               닭
                                                                           밁
                                                                                                                                                                                                                                                                                                                                             The invention relates to novel human genes (ABZ66891-ABZ68209) and the CC encoded secreted proteins (ABP99470-ABP99872) useful for preventing, CC treating or ameliorating medical conditions e.g. by protein or gene CC therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and CC (antlagonists are useful in the diagnosis, treatment and prevention of: CC (a) cancer, e.g. breast and ovarian cancer and other cancers of the CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, CC lung or urogenital; (b) immune disorders e.g. Addison's disease, CC allergies, autoimmune haenolytic anaemia, autoimmune thyroiditis, CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, CC bacterial, fungal and parasitic infectious
                                                                                                                                                                                                                                   Query Match

The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing or treating cancers or other hyperproliferative disorders. Additionally, the secreted proteins and their nucleic acids may also be used in the treatment of autoimmune disorders, inflammatory disorders, diseases involving angiogenesis, AIDS (acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote wound healing. Nucleic acids of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein genomic fragment referred to in the disclosure of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 58181 BP; 15503 A; 12755 C; 13504 G; 16419 T; 0 U; 0 Other;

ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins are thought to be involved in biological activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human secreted proteins and nucleic acids, useful for detecting or treating cancer or other hyperproliferative disorders, autoimmune disorders, inflammatory disorders, HIV disease, hepatitis or anemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 2331-2345; 2474pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises the amino acid and coding sequences of human secreted proteins. The DNA and protein sequences of the invention are useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating; haematopoietic or haematological disorders (e.g. anaemia and haemophilia); inflammatory disorders (e.g. inflammatory bowel disease and Crohn's disease; neoplastic disease (e.g. cancer and leukaemia); wound healing and disorders of epithelial cell proliferation; immune disorders (e.g. autoimmune disorders and asthmatic disorders); cardiovascular disorders (e.g. atherosclerosis and myocarditis); infectious disease (e.g. HIVARDS); endocrine disorders (e.g. diabetes); and gastroenitestinal disorders (e.g. dioorders (e.g. diabetes); and gastroenitestinal disorders (e.g. diodenal ulcers and gastroenitestinal disorders (e.g. diodenal ulcers and gastroenites). The present DNA sequence was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 964; 1512pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          preparing a diagnostic or pharmaceutical composition for diagnosing, preventing or treating hematopoietic or hematologic disorders, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 58181 BP; 15503 A; 12755 C; 13504 G; 16419 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human GPCR gene SEQ ID NO:883
                                                                                                        Sequence 39703 BP; 10210 A; 8488 C; 9860 G; 11145 T; 0 U; 0 Other;
                                                                                                                                            triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polyneptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADCB5548-ADCB7616 encode GPCR's of the

The products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be antiarthritic, antirheumatic and immunosuppressive activity and can be used for gene therapy. The reagent of the invention and any proteins and antibodies derived from it, are used (i) for analysing tissue and blood samples for medical diagnosis; (ii) for diagnosis and characterisation of chronic joint diseases, on the basis of molecular characterisation, and determining the etiological pathogenicity principle of as yet uncharacterised inflammatory diseases, also monitoring progression and/or treatment of disease, and optimisation of therapy and (iii) for developing treatments for inflammatory diseases, particularly of joints, infections and tumours. The DNA was isolated from a human genomic library by screening with LBP-3 cDNA (see ALBA26501). The open reading frame spans 10 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Wethods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            P-PSDB; AAB82809.

Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53 pathway in Drosophila.

Example 2; Page 320-351; 678pp; English.

cc modulating agent, by contacting an assay system comprising a purified HM cc polypeptide (human orthologue of genes that modify the p53 pathway in cc prosphila) or nucleic acid with a test agent under conditions, where but for the presence of the test agent the system provides a reference cc the presence of the test agent—biased activity of the assay system. Cc activity, and detecting a test agent—biased activity of the assay system. Cc contacting a cell defective in p53 pathway of a cell (comprising cc protecting a cell defective in p53 pathway of a cell (comprising contacting the capacity by a p53 pathway of a cell (comprising contacting the restored), modulating (M3) a p53 pathway cf a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide comprising an HM amino acid sequence, where p53 function is restored), modulating (M3) a p53 pathway cf a disease in a patient (comprising: (a) obtaining a biological sample cf a disease in a patient (comprising: (a) obtaining a biological sample cf from the patient (comparison indicates a likelihood disease). (M1) is useful contentifying modulators of the p53 pathway. A probe for HM expression is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 * expression level. (M2) are useful for modulating the p53 pathway. A probe for HM expression contents and the p53 pathway. A probe for cell conterers (e.g. cancer). Another two new methods (M2 and CC proliferation of the cell, so that the cell cycle. (M2) and usefuric acid ancoding defects in the p53 pathway of a cell, thus restoring the p53 pathway of a cell, thus restoring the p53 pathway of a cell, thus restoring content contents of the cell, so that the cell cycle. (M2) and (M3) are useful for treating defects in the p53 pathway such as angiogenic, apoptotic or cell proliferation disorders. The present sequence is an HM content of the cell and disorders. The present sequence is an HM content of the cell and The invention relates to identifying (MI) a candidate p53 pathway nucleic acid encoding a p53 pathway modifying protein

                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel human Ras-like protein comprising a fully defined sequence of 615 amino acids, given in the specification, its allelic variant, orthologue or its fragment comprising at least 10 contiguous amino acids. The new human Ras-like proteins and the polypeptides encoding them are useful in the diagnosis, prevention, and treatment of inflammation and disorders associated with cell proliferation and apoptosis. They are also useful in treating AIDS and other infectious or genetic immunodeficiencies, neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neurodegenerative diseases, ischemic injurviral infections, cancer and osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated Ras-like protein polypeptides, useful for treating AIDS, neurodegenerative diseases, ischemic injuries, toxin-induced diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14-MAR-2001; 2001US-00805455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-MAR-2002; 2002WO-US007159.

                                                    The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the efficacy of a test compound to inhibit prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has patient; (f) assessing the prostate cancer has patient; (f) assessing the prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (ii) is also useful as a pharmacodyanamic or pharmacogenomic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABV12806 standard; cDNA; 407 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200160860-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human prostate expression marker cDNA 12797

                                                                           The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastatized in a patient; (g) determining whether prostate cancer has metastatized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                          The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastazed in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker

                                                                 The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cell carcer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human prostate expression marker cDNA 42799.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABV42808 standard; cDNA; 458
